Freshmen Pledge \$100

The net results of the Sophomore's sacrifice of flowers in the interest of the Students' Friendship Fund at the time of their play is over \$100 from the Freshman class alone, according to E. Vincent, '23, chairman of the Christian Association Finance Committee. The results from other classes are less easy to tabulate, since in many cases pledges were simply added to the Association pledge cards at the time of the drive, or have not yet been handed in. That they amount to \$50 at least is, in Miss Vincent's opinion, almost certain.

Bryn Mawr's total contribution to the Student Friendship Fund is calculated to be over \$1200.

CHRISTIAN ASSOCIATION ELECTS REPRESENTATIVES. ADDS TO DUES

Freshman Board Member Is Margaret Stewartson

Three matters were acted upon by the Christian Association meeting held Taylor Hall last Wednesday evening. Margaret Stewartson, '25, was elected to the Board as Freshman member, and Josephine Felts Phelps as graduate member. It was then voted that, in view of a favorable sense of the meeting taken last spring, the dues be increased from \$1.50 to \$2.

HISTORY CLUB IS LIBERAL CLUB SINCE MEETING YESTERDAY

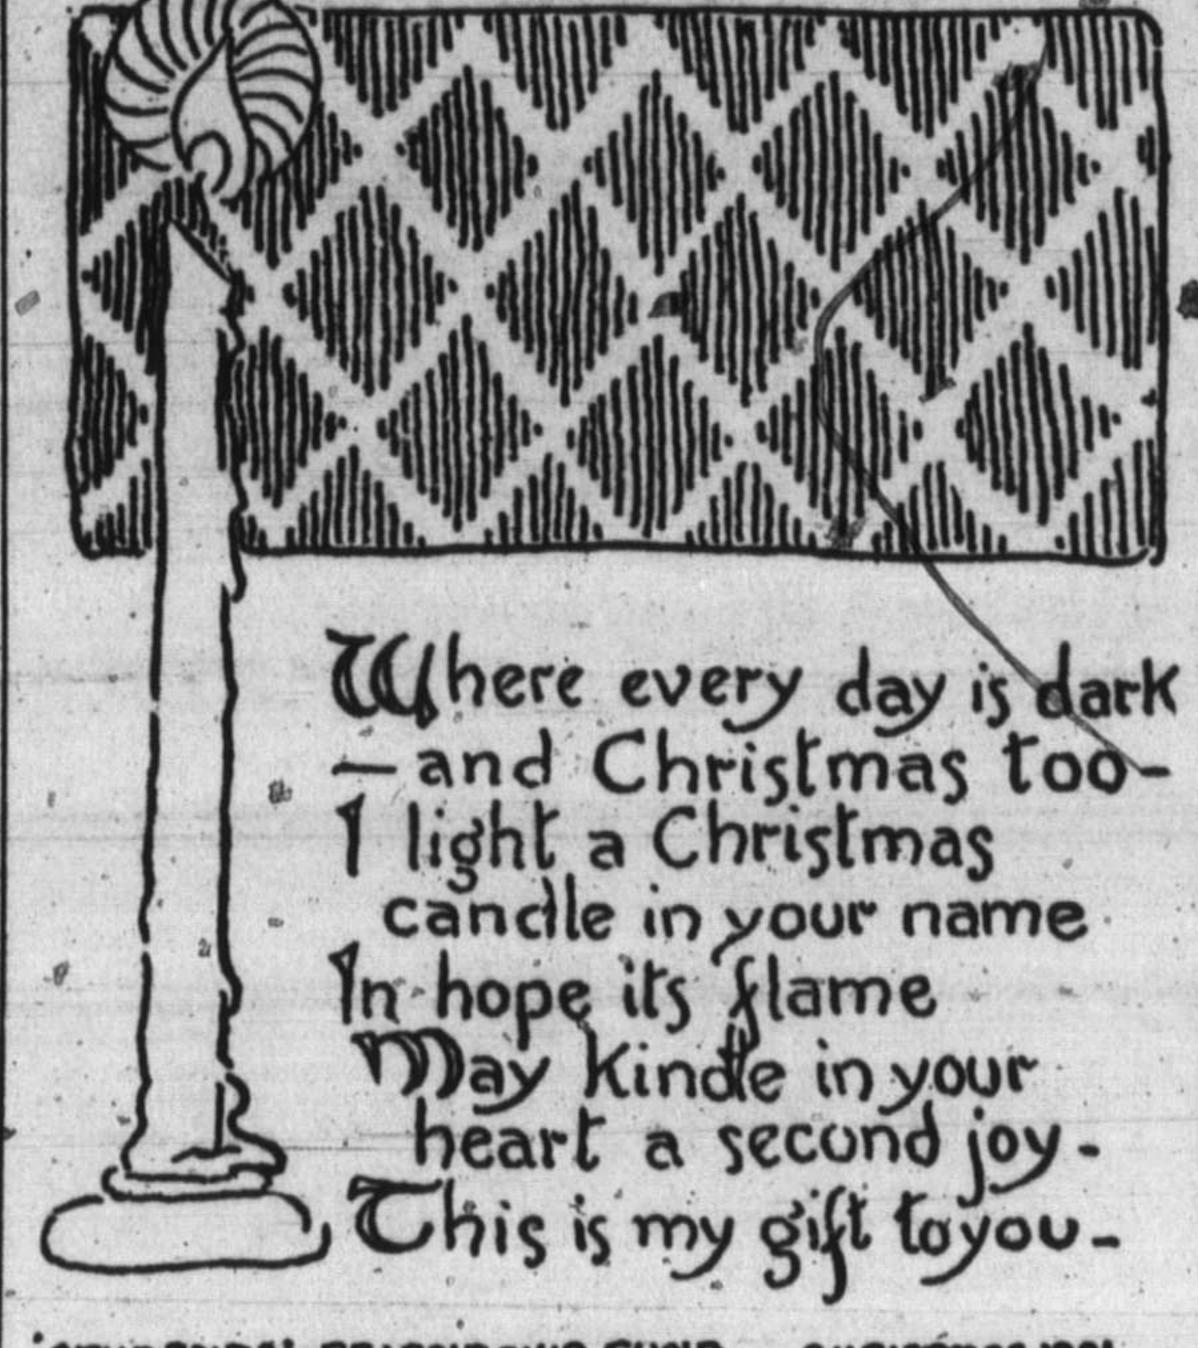

The History Club no longer exists. What was the History Club has now become the Liberal Club.

This decision was reached at a meeting yesterday, which also planned the first informal discussion of the new organization, to take place in Room 77, Denbigh, at 7.30 o'clock on Saturday night. The subject before this meeting will be the question of compulsory chapel. Refreshments will be served and the meeting is closed to non-members.

How Were X-Rays Discovered?

SIR James Mackenzie Davidson visited Professor Roentgen to find out how he discovered the X-rays.

Roentgen had covered a vacuum tube, called a Hittorf or Crookes tube, with black paper so as to cut off all its light. About four yards away was a piece of cardboard coated with a fluorescent compound. He turned on the current in the tube. The cardboard glowed brightly.

Sir James asked him: "What did you think?"

"I didn't think, I investigated," said Roentgen. He wanted to know what made the cardboard glow. Cnly planned experiments could give the answer. We all know the practical result. Thousands of lives are saved by surgeons who use the X-rays.

Later on, one of the scientists in the Research Laboratory of the General Electric Company became interested in a certain phenomenon sometimes observed in incandescent lamps. Others had observed it, but he, like Roentgen, investigated. The result was the discovery of new laws governing electrical conduction in high vacuum.

Another scientist in the same laboratory saw that on the basis of those new laws he could build a new tube for producing X-rays more effectively. This was the Coolidge X-ray tube which marked the greatest advance in the X-ray art since the original discovery by Roentgen.

Thus, scientific investigation of a strange phenomenon led to the discovery of a new art, and scientific investigation of another strange phenomenon led to the greatest improvement in that art.

It is for such reasons that the Research Laboratories of the General Electric Company are continually investigating, continually exploring the unknown. It is new knowledge that is sought. But practical results follow in an endless stream, and in many unexpected ways.
